EDUCATION

University of Toronto

Expected Graduation April 2022

- BASc in **Engineering Science**.
- Specialization in **Machine Intelligence**, minor in **Engineering Business**.

SKILLS

- **Design** Figma, Sketch, Adobe XD, Invision, & Zeplin.
- **UX** Responsive design, user interviews, user personas, journey mapping, iterative prototyping, usability testing, A/B testing, branding, & illustration.
- **Code** ReactJS, JavaScript, Sass/LESS/CSS, & HTML/Jinja.
- **Data** Python, Julia, PostgreSQL, & Tableau and data visualization.

WORK EXPERIENCE

Select Equity Group, New York — *Data Engineer Intern*

Fall 2020

- Designed and curated Tableau dashboards that supplied data trends for investment analysts.

Intel, Toronto — *Software Engineer Intern*

Summer 2020

- Designed a spreadsheet system to streamline feedback from project owners using Python to save 7 man hours per week.

Publicis Sapient, Toronto — *Software Engineer Intern*

Summer 2019

- Pitched and built a Twitter analytics tool prototype to provide personalized marketing insight on leveraging social media influencers and trends using **Figma, ReactJS & Sass**.
- Analyzed and improved performance of \$400 million+ e-commerce site to optimize its search engine ranking using **ReactJS, JavaScript, & Sass/LESS**.

Morneau Shepell, Markham — *IT Intern (UI/UX)*

Summer 2017, Summer 2018

- Designed and developed internal helpdesk portal for clients to access data stored in our back-end using **JS & HTML/CSS**.
- Streamlined login/signup page redesign to improve flow and form clarity that decreased average time of user flow by **39%**. Created wireframes, mockups, design systems, and user research campaigns for prototyping and development for 10+ web and mobile projects using **Sketch** and Invision.

PROJECT HIGHLIGHTS

MakeUofT Hardware Signout — *UX Developer*

Prototype

Apr 2020 - Present

- Designed and developing an inventory sign-out system for 5000+ hardware components using **Figma & ReactJS**.
- Incorporated user research from previous hackathons aiming to reduce hardware wait times by 1.5 hours for 300+ participants at hardware-oriented hackathon, MakeUofT.

Aweary, RBC AmpHacks 2019, 3rd Place — *Designer*

Prototype

Sept 2019

- Designed proof-of-concept mobile app to notify or awaken users on their commute using **Figma**.
- Conducted user interviews, user personas, journey mapping, and iterative prototyping during 24 hour hackathon.
- Awarded **3rd place** out of 40+ projects and 200+ participants.

Notepal, UofTHacks VI, 1st Place — *UX Developer*

Jan 2019

- Implemented a note-taking device that uses computer vision and Speech-To-Text NLP to generate LaTeX documents, winning **1st place** out of 100+ projects and 400+ participants.
- Designed and built a site to display documents retrieved from database using **Sketch, JavaScript, CSS, Jinja2, & HTML**.
