EDUCATION

University of Toronto

Expected Graduation April 2022

- BAsC in **Engineering Science**.
- Specialization in **Machine Intelligence**, minor in **Engineering Business**.

SKILLS

- **Code** **React, JavaScript** (TypeScript, Flow), Redux, CSS (Sass, LESS), & HTML.
- **Data** **Python** (PyTorch, TensorFlow), **PostgreSQL**, Tableau, & Julia.
- **Design** **Figma**, Sketch, Adobe XD, Adobe Photoshop, & Invision.
- **Misc** Git, JIRA, GCP, Apache Airflow, & Scrapy.

ENGINEERING EXPERIENCE

Confluent, Mountain View — Frontend Engineer Intern

January – August 2021

- Implemented multi-organization authentication and support to unify user identities on Confluent Cloud.
- Redesigned invitation and organization structure to allow for a one-to-many user to organization relationship using **React & Redux**.

Select Equity Group, New York — Data Engineer Intern

September – December 2020

- Developed data pipelines using **Python** to create Tableau dashboards that supplied data trends for analysts.
- Designed data models to ingest and process data from scraped web pages and public/private APIs using **Airflow (Python)**, Google Cloud Platform, and Scrapy.

Intel, Toronto — Software Engineer Intern

May – August 2020

- Designed and developed a data system to streamline feedback from project owners using openpyxl in **Python** to save 7 man hours per week.
- Automated additional pipeline features in daily release of internal tools in **Python**.

PROJECT HIGHLIGHTS

UofT Engineering Election Website — UX Developer

May 2021 – Present

- Designing and developing an online election system for UofT Engineering's student government using Figma & **React**.
- Implementing election set-up, voting, and automatic result calculation to run 50+ yearly elections for 5000+ students.

MakeUofT Hardware Signout — UX Developer

April 2020 – Present

- Developing an inventory and checkout system for 5000+ hardware components using **React, Typescript, & Redux**.
- Aiming to reduce hardware wait times by 1.5 hours for 300+ participants at hardware-oriented hackathon, MakeUofT.

Notepal, UofTHacks VI, 1st Place — UX Developer

January 2019

- Implemented a note-taking device that uses computer vision and Speech-To-Text NLP to generate LaTeX documents.
- Designed and built a site to display documents retrieved from database using **JavaScript**, CSS, Jinja2, & HTML.
- Awarded **1st place** and Best Use of Google Cloud Platform award out of 100+ projects and 400+ participants.

EXTRACURRICULARS

IEEE UofT Branch — Electronics Chapter Co-Chair

2019 – 2020

- Spearheaded a team of 22 to plan and execute 5 large-scale tech events, including a hackathon and technical workshops.
