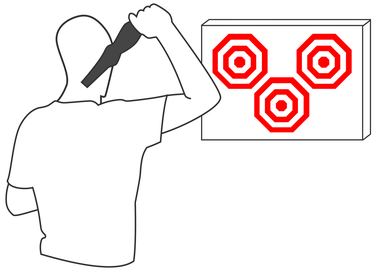
DRAW QUICK AND WIN FAST

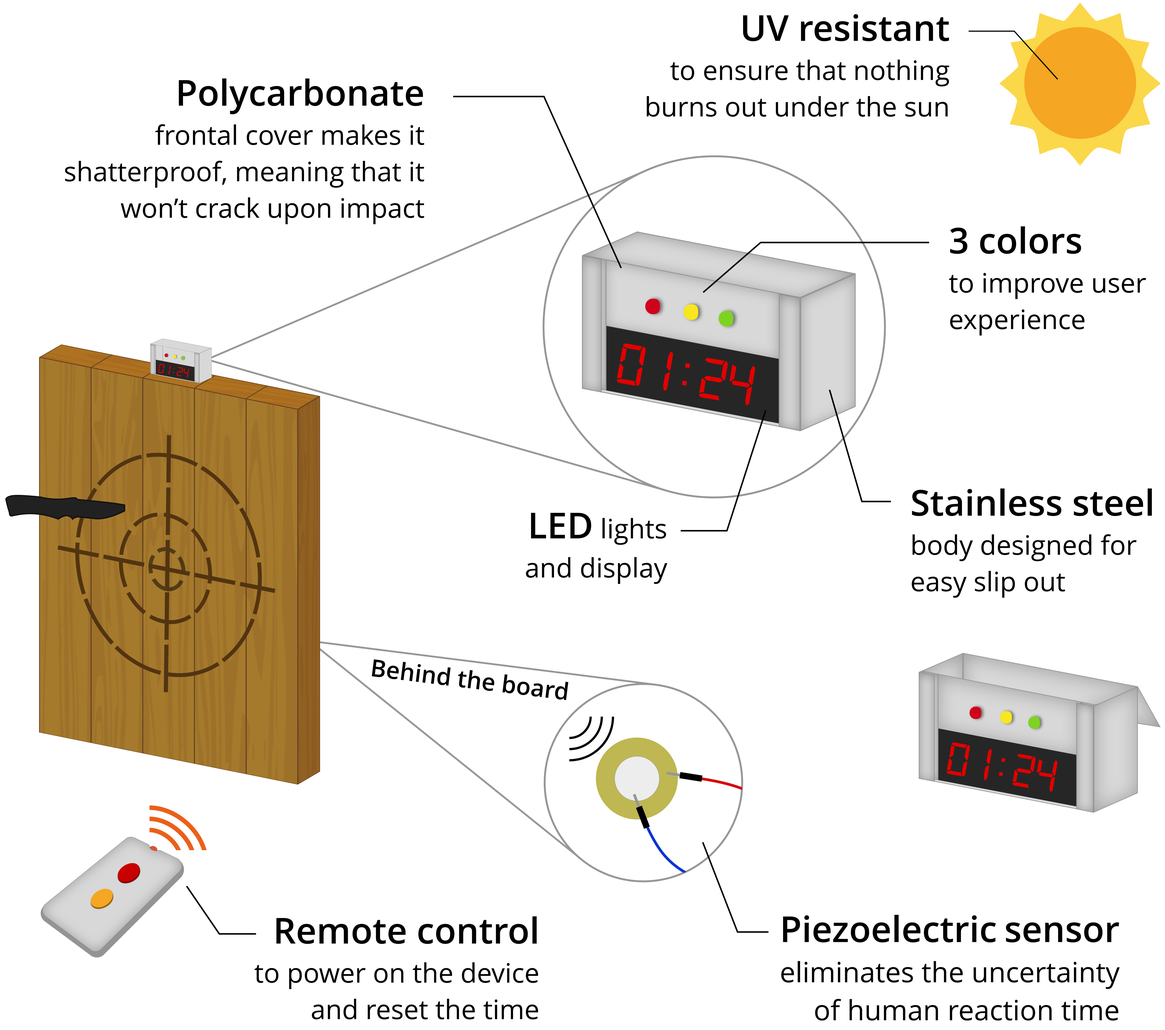
Quick draw is a sport where two throwers must draw their knives and hit the target faster than the other.



Often, the knives hit within a fraction of a second from each other, making it impossible to tell by sound or sight who the winner is.

WHAT IS QUICKNIFE?

An all-in-one device that measures the time of a knife throw but also has lights for the player indicating “Go”, “Ready”, and “Lose”.



ARDUINO? ARDUI-YES.

Small but mighty. The simple interface of the Ardunio powers the device and connects every component of the Quicknife.

PIEZO? WHY THOUGH?

We’ve relied on a sensor that feels force, which will transfer voltage to the Ardunio and produce a signal that stops the timer.

SPECS per device

WEIGHT	1 kg
DIMENSIONS	16 x 10 x 10 cm
BATTERIES	9 V
MATERIAL COST	$120
DISPLAY INTENSITY	450 mcd per segment
